

Mario & Luigi

What are we?

Asian Green Toads

Where do I live in the wild?

In the dry grasslands of Kazakhstan. We are nocturnal so we sleep all day and are active at night.

How are we looked after as pets?

We live in a big vivarium with space to hop around. We have soil to dig in as well as logs and plant pots we can climb on or hide under. We have a big water dish we can sit in if we want to.

What do we eat?

We are carnivores. We eat a variety of insects. Black crickets and wax worms are our favourites.

What do we look like?

We have big eyes and bumpy warty skin. Our front legs are muscly and we have big back legs for bouncing. Mario is large and brown in colour. Luigi is smaller than his brother and green in colour.

Why do we love Mario & Luigi?

Mario & Luigi are brothers and they love to chase each other round and jump on each other. They are very funny to watch and excellent at bouncing.

Our Story

We are brothers and we have always lived together. We came to Lion Learners East Midlands when our previous owner could no longer care for us.

Where can I visit?

Mario and Luigi mainly go to schools to help the children learn about amphibians.

As amphibians have skin they can breathe and drink through they need to be handled wearing clean gloves. This means they aren't suitable for birthday parties or anywhere else where this could be difficult to manage. Please ask for more details.
